

Armond Morad

Manager of Engineering, Construction Management Division
Port of Long Beach

Armond Morad is Manager of Engineering in the Construction Management Division at the Port of Long Beach. A registered civil engineer with over 25 years of experience in engineering and construction management, he also holds a general engineering contractor license.

Armond leads the Port's multi-disciplinary Infrastructure Group, overseeing the delivery of complex, large-scale capital projects. Under his leadership, his team has successfully managed several multi-million-dollar, award-winning projects, including the Pier G Wharf Extension, which expanded Berth G236 by 245 feet to accommodate 14,000 TEU vessels, as well as Fireboat Stations 15 and 20, built to support the Port's advanced fireboats, Protector and Vigilance.

Passionate about innovation and sustainability, Armond is a strong advocate for integrating technology into construction practices. He is currently leading efforts to implement zero-emission construction equipment across Port projects, helping drive cleaner, more efficient infrastructure development.
